

# Problem Set 12 - 2014 - Answer

**Problem R-10K** ( $C_{42}H_{33}P_3$ ). The proton decoupled  $^{31}P$  NMR spectrum below is of one of the compounds **1**, **2** or **3**.

**Problem R-10K**  $C_{42}H_{33}P_3$

80.96 MHz  $^{31}P$   $\{^1H\}$  NMR spectrum.

(Source: Peter H. M. Budzelaar)

(a) Which of the structures is correct? 1. Explain briefly.

**3** Should show just a singlet, **2** should show three shifts (AMX or ABX), each a dd. Neither one fits the spectrum  
**1** would show an  $AX_2$  or  $AB_2$  pattern, this clearly fits

(b) What kind of pattern is this (e.g.  $AA'BB'$ )  $AB_2$ . Analyze the spectrum to obtain all pertinent coupling constants and chemical shifts, and report them below.

$$\nu_A = \nu_3 = -1295.2 \text{ Hz}, \delta_A = -16.0$$

$$\nu_A = (\nu_5 + \nu_7) / 2 = -1417.6 \text{ Hz}, \delta_B = -17.51$$

$$J_{AB} = (\nu_1 - \nu_4 + \nu_6 - \nu_8) / 3 = 120.2$$

(c) What is the proton NMR frequency on this spectrometer? 200

$$\frac{\gamma_H}{\gamma_P} \times 80.96 = 199.95 \text{ MHz}$$

**Answer**

Interpret the NOE difference experiments on the compound below shown on the next two pages. The protons were partially assigned in Problem R-28A. Use the information to complete the assignment and establish the relative stereochemistry at the four asymmetric centers around the cyclopentane ring. Are there any remaining ambiguities?

(c) Give a complete structure of **R-84P** below and make a note of any additional structural ambiguities (if any) that remain. Assign signals.

**Problem R-100.** ( $\text{C}_8\text{H}_8\text{Se}$ ) Determine the structure from the 270 MHz  $^1\text{H}$  NMR spectrum.

3 (a) DBE 5

(b) Determine the structure of **R-100**. Mark the chemical shifts on a drawing of the molecule below.

11

(c) Obtain all of the coupling constants from the expansions of the multiplets C and D. Report them in the standard format ( $^nJ_{\text{X-Y}} = 0.00$  Hz). Clearly mark them on a drawing of the molecule, and on the spectra.
